

Pennsylvania Railroad N5/N5b Cabin Cars

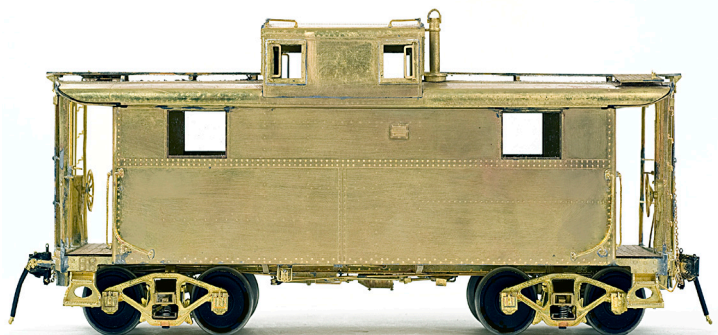

Kohs & Company N5 Sample Model

The Pennsylvania N5/N5b cabin car is the third in our series of caboose projects. This project will build on the success of our 'Penny' N5c project which was the first in our series.

A broad variety of versions and variations are being produced, both with and without antennas. The basis for this project is three distinct versions: 'as-built' N5's, rebuilt N5's with collision posts (which differ in many ways from N5b's) and of course, N5b's. The variations being produced provide for a range of service periods, service locations and service types, including Express passenger service. Please see the back of this brochure for a complete listing of the versions and variations being produced. These models will incorporate all of the standard features and detail that our models have become known for, complete interior and exterior detail, ball-bearing equipped fully functional trucks and full electric lighting among them.
