The 'late' modified New York Central J3A Hudson is coming in both 2 & 3-rail versions. Known as the 'King' of the NYC 'Hudson' class locomotives in the late 40's and early 50's, this is the prototype that we have chosen to be our first in a series of limited edition 3-rail brass scale models complete with PT-4 centipede tender. Inspired by our o'scale design, we will be modeling both the 'late' and 'de-streamlined' variations and we intend them to be the finest 3-rail locomotive models ever offered. We are re-engineering from the railhead up and taking advantage of the new low-profile track and control systems, this is the scale model that you have been waiting for!

All Kohs & Company Models are Constructed by Sun- Jin Models Company and feature Dalle Electronics Components

Please contact us to request a complete 3-rail prospectus and information regarding our future projects (photo of 2-rail sample model)
